

PRIVATE PBX EARLY ACCESS

Your phone system, without the 3CX headache.

A dedicated PBX, a clean admin panel and simple agent apps - provisioned as one complete service.

ONE SYSTEM

Private server
Android app
Browser phone

Queues + agents
DIDs + trunks
Live control

EARLY ACCESS

50% OFF FIRST MONTH

Coupon code: PBX50 - monthly plans only

pbx.dialstop.net

What the customer receives

Everything needed to operate a small call team without managing a complicated PBX stack.

1

Dedicated setup

Private server, customer domain and isolated PBX configuration.

2

Agent access

Android APK plus browser/PWA access for iPhone and desktop.

3

Call handling

Queues, ring groups, hold audio, transfers and agent presence.

4

Admin control

Live calls, call history, listening, whisper, barge and end-call tools.

5

Bring your numbers

Connect provider trunks and route inbound DID's to the right queue.

6

DialStop bridge

Route Press-1 calls and Press-2 callbacks into the same workspace.

Built for straightforward operations

Agents join with an invitation code. Admins see capacity, extensions, queues and live status from one screen.

From payment to live calls

The onboarding path is deliberately short. We provision the infrastructure; the customer configures their team.

1

Choose capacity

Select a monthly plan based on simultaneous calls and extension allowance.

2

Automatic provisioning

A private VPS, PBX instance and customer subdomain are created.

3

Connect telephony

Add a SIP provider or trunk, connect the DID and choose its queue.

4

Invite the team

Generate single-use or bulk invitation codes for Android and web agents.

5

Test and launch

Run an inbound test, confirm audio, then open the queue for production.

Typical setup is guided from the customer dashboard.

Press 2 becomes a managed callback

No shared spreadsheets. No two agents calling the same person.
Every request has an owner and an outcome.

CUSTOMER	CAMPAIGN	REQUESTED	OWNER	STATUS	ATTEMPTS	MANAGE	
Private number No contact details	Press 2 DIME refid	17 Aug 2026, 17:24	Jake	Claimed	4	Jake - 800	Save Complete Retry later

- 1

Request

A contact presses 2 in a DialStop campaign.
- 2

Claim

One agent owns it; the rest of the team sees the lock.
- 3

Connect

The PBX rings the agent, then connects the customer.
- 4

Resolve

Complete, retry later or release it back to the queue.

The callback inbox is shared live across the assigned queue.
Ownership and outcomes update for every agent.

Agents get a phone, not a PBX course

Join the team, choose Available or Away, answer calls and transfer to another available agent.
